Suggestions For Sowing Seeds During the Summer Months

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snap-dragon, and finer perennial seeds, etc. should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, then taken to greenhouse and some cheesecloth placed over them until the seedlings are of sufficient strength to have it removed.

TRYSONIC STOCKS

This new strain of Stock has been in process of development since 1915, but only in the last ten years have experiments come to a conclusion. Trysonics, when grown from seed, come 85% double. At the four leaf seedling stage, the singles are noticeable weaker. When these are removed, it is possible to have a planting of 100% doubles. In all other respects the Trysonic is identical with other double strains.
